Programming Fundamentals With JavaScript, Software University SoftUni

JavaScript Advanced, Software University SoftUni

★ PROJECTS

Movie Catalog

Movie catalog is a single page web application optimized for mobile devices which enables its users to explore a large catalogue of movies. The application has the ability to search movies using the name, shows the trailers for every movie and the cast. Movies can also be sorted from the menu based on their genre. The web application improves the user experience and functionality by allowing the users to create a profile and save their favorite movies in a designated tab. The web application is created with React.js, Redux Toolkit and TMDB API

House Market

House Market is a single page application which enables the users to look for properties to rent, buy or reserve for a short stay. The application also allows users who are registered and paying a monthly fee to put their property on the market. The web application is built with React.js, Redux Toolkit, Firebase, Algolia, Stripe, Leaflet

Cinema App

Cinema App is a MERN project which enables users to view the weekly cinema schedule. All registered users can reserve and cancel their movie tickets at any time of the day. The movie catalog is complete with trailer and description for every film. Built with React JS, Redux Toolkit, Node.js, Express.js, MongoDB.
